Subject: Application for an Internship Position

Dear Sir,

My name is Ahsanul Hoque, and I'm a final-year Computer Science and Engineering student at the University of Chittagong. A few weeks ago I pitched Livora, the AI-powered healthcare platform I built and run, to your team. I understand it's still an early conversation and nothing has been formalized, but that discussion is what convinced me AZNEO is a place I'd genuinely like to work from the inside, not just pitch to from the outside. I'm writing to apply for an internship.

Over the past two years I've shipped production software across most of what AZNEO actually does. I built a retail inventory, billing, and sales-analytics system for a client, which sits close to your ERP and POS work. I built Aurora Gadgets, a full-stack e-commerce platform covering the storefront, admin, cart, and checkout. And I've shipped three embedded/IoT projects – a LoRaWAN-based emergency communication network, a precision-agriculture stack running edge inference on a Raspberry Pi, and a multitasking operating system for ESP32 – which is the kind of work I'd expect your IoT & AI Lab to be building toward. Livora itself is a full-stack product with LLM and RAG integration running in production, which is the applied-AI half of that same picture.

I'm not looking for an internship to sit in on projects. I want to build things your team can actually ship, and given where the Livora conversation already stands, I think an internship is also the fastest way for both sides to find out whether a longer collaboration makes sense.

I've attached my CV for reference, and I'd welcome the chance to discuss this further at your convenience. Thank you for your time and consideration.

Sincerely,

Ahsanul Hoque

Founder & CEO, Livora
